

Product Group Filters.

Product Category Gas Conditioning.

CLF-5

Liquid Particle Filter Series CLF®

Version CLF-5, CLF-5/W for the separation of aerosols from gases

Special Features

- **High retention rate of 99.9999 % for particles > 0.1 µm**
- **Also with integrated hydrophobic diaphragm for analyzer protection**
- **Condition of filter element visible from outside**
- **Easy change of filter element**
- **Wall-mounting**

Application

The M&C liquid particle filters CLF-5 and CLF-5/W are suitable for the separation of all types of fine liquid particles and are recommended for sample gases with an acid dew point above 100 °C [212 °F], for example for flue gas measurements of heavy oil or hard coal combustion plants.

The filter separates aerosols (finest liquid droplets) which still have passed the sample gas cooler. After sample conditioning, the CLF-5 is best positioned directly in front of the flow meter of the analyzer.

To increase system reliability, the CLF-5/W version is equipped with an integrated hydrophobic protective membrane.

liquids. The hydrophobic protective membrane integrated in the filter element holder prevents the liquid from breaking through to the filter outlet in the event of a malfunction.

Due to the glass filter body, the condition of the filter is immediately visible from the outside without opening the filter assembly.

The GL 25 connection enables automatic emptying of the liquid by means of an optional SR25.2.W external peristaltic pump.

No tools are required for element replacement. The optimum positioning of the O-ring always ensures a secure sealing between the filter body and the filter head. Filter inlet and outlet can be rotated 180° on the wall mounting, allowing flexible adaptation to local conditions during installation.

Description

The filter element of the M&C liquid particle filter CLF-5 has a two-layer construction and the flow direction is from the inside to the outside. The inner, very fine layer binds the fine liquid particles suspended in the gas and forwards them with the gas flow to the outer, coarser layer. On their way through the filter element, the very fine liquid particles accumulate to form droplets. The vertical flow direction, together with gravity, supports the dripping of the liquid into the filter glass.

The filter element retains its efficiency even when completely saturated with liquid. Without being contaminated by solid particles, its service life is almost unlimited. The pressed microfibers are joined with PVDF binder to avoid the influence on sample gas. The CLF-5/W version is equipped with a breakthrough stop for water and water-like

Handle with care! Danger of acid burns!

* Dimensions required for dismounting 310 mm [≈ 12.2"]

Dimensions in mm [Inches]

- ① Protective hydrophobic diaphragm unit only with version CLF-5/W.
- ② On request the G 1/4" i thread connection can be used as a second gas outlet through a $\varnothing 5$ mm [≈ $\varnothing 0.2$] bore hole.

Technical Data

Liquid particle filter	CLF-5	CLF-5/W
Part No.	03F3000	03F3005
Option: water stop	None	Yes
Gas flow	Max. 300 NI/h	Max. 200 NI/h
Gas pressure	0.2 to 2 bar abs. ΔP max. 1.0 bar	0.3 to 2 bar abs. ΔP max. 0.5 bar
Differential pressure with a new filter element, with air, 20 °C [68 °F]	3 6 10 mbar 100 200 300	17 35 mbar 100 200
Sample temperature	Max. +80 °C [176 °F]	
Ambient temperature	0 to +60 °C [32 to 140 °F]	
Storage temperature	-25 to +80 °C [-13 to 176 °F]	
Filter element/retention rate	2-layers CLF-5/99.9999 % for particles > 0.1 μ m	
Filter dead volume	70 cm ³	
Volume capacity for liquid	20 ml	
Material of sample contacting parts	PVDF, glass, FKM	PVDF, glass, FKM, PTFE, Polyester
Sample gas-/drain connection	G 1/4" i DIN ISO 228/1/GL 25 cap	
Type of mounting	Wall-mounting	
Weight	Approx. 0.3 kg [≈ 0.7 lb]	

Please note: NI/h and NI/min refer to the German standard DIN 1343 and are based on these standard conditions: 0 °C [32 °F], 1013 mbar.

CLF-T

Liquid Particle Filter Series CLF®

Versions CLF-T, CLF-SS made out of special materials, for the separation of aerosols from gases

Special Features

- High retention rate of 99.99 % for particles > 0.1 µm
- High chemical resistance of type CLF-T
- Type CLF-SS suitable for high pressure applications
- Type CLF-T: filter element condition visible from the outside
- Easy change of filter element
- With bracket for wall-mounting

Application

The M&C liquid particle filter CLF® is suitable for the separation of fine liquid particles of all kinds. The CLF-T is recommended for sample gases with a sample gas temperature of up to 100 °C [212 °F] and the CLF-SS is recommended for sample gases with a temperature of up to 180 °C [356 °F]. Examples are measurements of flue gas of heavy oil and hard coal combustion plants.

The filter separates aerosols (finest liquid particles) which have still passed the sample gas cooler. After sample conditioning, the CLF is best positioned directly in front of the flow meter of the analyzer.

Description

The filter element of the M&C liquid particle filter CLF® has a two-layer construction and the flow direction is from the inside to the outside. The inner, very fine layer binds the fine liquid particles suspended in the gas and passes them on to the outer, coarser layer with the gas flow. On their way through the filter element, the very fine liquid particles accumulate to form droplets. The vertical flow direction, together with gravity, supports the dripping of the liquid into the filter glass.

The filter element retains its efficiency even when completely saturated with liquid. Without being contaminated by solid particles, its service life is almost unlimited. The pressed microfibers are joined with PVDF binder to prevent the influence on sample gas.

With regard to the CLF-T filter, the condition of the filter is immediately visible from the outside through the glass filter body without opening the filter assembly. The GL 25 or G 3/8"-connection allows an automatic emptying of the liquid by means of an optional external peristaltic pump SR25.2.W or automatic condensate flow trap AD-SS.

No tools are required for filter element replacement. The optimum positioning of the O-ring always ensures a reliable sealing of the filter body to the filter head.

Filter inlet and outlet can be rotated 180° on the wall-mounting so that flexible adaptation to local conditions is possible during installation.

The filter is available in PTFE/glass or stainless steel 316Ti.

Handle with care! Danger of acid burns!

FP-70P190-D

Universal Bypass Filter Series FP® for Liquid Filtration

Versions FP-70P200-D, FP-70P190-D, FP-200P190-D

Special Features

- **Liquid filtration in a settling area or with self-cleaning effect through bypass flow possible**
- **Coarse mesh filter element made of PP**
- **Filter head made of PVDF**
- **Filter element condition is visible from outside through the glass filter body**
- **With wall-mounting bracket**

Application

The M&C universal bypass filters are mainly used in liquid analysis for the filtration of small sample quantities from a liquid flow. Two different filtration methods are available:

In order to obtain the desired self-cleaning effect, the bypass filters FP-70(200)P190-D should be operated with a minimum bypass flow of 300 NI/h.

1. Filter Type FP-70P200-D:

Filtration of a liquid flow in a settling area.

2. Filter Type FP-70(200)P190-D:

Filtration of a liquid flow with self-cleaning effect through a bypass flow with fast flow rate via the active filter element surface.

Description

The basic construction of the bypass filter corresponds to the line of universal filters which are used for gas filtration. The coarse mesh filter element is supplied with a pore grade of 70 or 200 µm and is manufactured out of PP including the supporting pillar. The filter element is screwed into the filter head with the filter element holder.

Through the glass filter body, the condition of the filter element is visible from the outside at any time without dismantling the filter. For changing the filter elements, no tools are necessary.

The optimum positioning of the o-ring guarantees a safe sealing of the filter body to the filter head. The sample outlet can be rotated 180° at the wall-mounting bracket so that during installation, flexible handling is possible according to different local conditions.

The sample connections are located in the filter head and in the lower section of the filter glass. Corresponding tube connectors and GL 25 adaptors in DN 4/6, 6/8, 8/10 or 10/12 are optionally available.

* The dimensions and designation of the screw-in threads correspond to the respective applicable standard. The tolerances of the thread standards are matched to metal threads and cannot be applied to plastic threads.
Please note: NI/h and NI/min refer to the German standard DIN 1343 and are based on these standard conditions: 0 °C [32 °F], 1013 mbar.

FP-AP

Universal Adsorption Filter Series FP®

Versions FP-240-D/F, FP-120-D/F and FP-AP, FT-AP, FS-AP for adsorption material

Special Features

- Can be filled with a variety of adsorption materials
- Easy change of filling materials
- Condition of filling material visible from outside
- Various materials available
- Wall-mounting

Application

The M&C Universal Filters FP-240-D/F, FP-120-D/F and FP-AP, FT-AP, FS-AP are used in analytical technology for the adsorption of interfering components.

Description

The M&C filter assembly FP...-D/F for larger filling quantities consists of the standard filter head FP and a special, approx. 200 mm long glass body F-240G-D/F in the case of version FP-240-D/F, or an approx. 100 mm long glass body F-120G-D/F in the case of version FP-120-D/F. The glass bodies are equipped with a pre-filter in the lower section, whereupon the filling can be entered. The flow direction to these fittings is from below via the GL 25-6 glass connection upwards to the filter head.

The M&C filter assembly F...-AP for small filling quantities consists of the standard filter head FP, FT or FS, in which an empty cartridge F...-AP for adsorbents is screwed in. The sample gas is directed downwards in the filter housing and flows through the cartridge from the bottom to the top, thereby ensuring a long contact with the adsorbent over the entire length of the cartridge. The design of this M&C filter assembly guarantees that only liquid-free gas flows through the cartridge when condensate droplets occur.

The condition of the filling material can be assessed from the outside without having to open the filter housing. No tools are required to change the filling, whereby the optimum positioning of the O-ring always ensures a secure sealing between the filter body and the filter head. Filter inlet and outlet can be rotated 180° on the wall bracket so that flexible adaptation to local conditions is possible during installation.

Downstream of the adsorption filter, an ultra-fine particle filter should still be used.

Universal Filter FP-240(120)-D/F

FPF-0,1GF

Front-Panel Mounting Fine Filter Series FP®

Versions FPF-0,1GF, FPF-3SS and FPF-2-0,3GF

Special Features

- Flat design
- Low internal dead volume
- Simple construction
- Easy assembly
- Straightforward change of filter element
- Universal applicability

Application

The M&C front-panel fine filters with deep-acting filter element reliably separate the solid contaminations occurring in analytical technology during gas filtration, in particular ultra-fine particles. The FPF front-panel filters are equipped with a glass fiber ultra-fine filter element (0.1 μm) in the FPF-0.1GF version and with a stainless steel filter element (3 μm) in the FPF-3SS version. The FPF-2 installation filter is equipped with a round glass fiber filter element (0.3 μm). The large filter surface of the cylindrical filter element (versions FPF-0.1GF and FPF-3SS) ensures reliable ultra-fine filtration and long service life with low pressure loss.

The 19" front-panel mounting technology requires flat devices, for which the FPF-0,1GF, FPF-3SS and FPF-2-0,3GF front-panel filters were primarily developed.

Description

Special features of the M&C front-panel filters FPF and FPF-2 are flat design, low internal dead volume, simple construction and assembly as well as universal usability.

The filter glass allows the condition of the filter to be seen immediately from the outside without opening the filter assembly. No tools are required to change the filter element, whereby the optimum positioning of the O-ring always ensures a reliable sealing between the filter glass and the filter body.

The gas connections are located at the rear of the filter body. The sample gas inlet can be rotated 180° at the front ring attachment so that flexible adaptation to local conditions is possible during installation.

The FPF-2-0.3GF has an integrated liquid alarm sensor.

Corresponding tube connections are optionally available.

FPF+

Front-Panel Mounting Fine Filter Series FPF®

Version FPF+

Special Features

- **Corrosion-resistant materials**
- **Large filter elements**
- **Great variety of filter element materials with different porosities available**
- **With connection for optional liquid alarm sensor LA3**
- **Medium and ambient temperature: max. +80 °C**
- **Low internal dead volume**
- **Straightforward filter element change without tools**
- **Universal usability**

Application

The solid contaminations occurring in analytical technology during gas filtration, in particular ultra-fine particles, are reliably separated by the M&C front-panel mounting filter. The large filter surface of the cylindrical, 75 mm long filter element guarantees reliable ultra-fine filtration and a long service life with low pressure loss.

The optionally integrated liquid alarm sensor LA3 is used in gas conditioning systems for monitoring gas cooling and condensate drains to protect downstream analysis equipment. This simple monitoring device reliably signals condensate ingress in the event of a defect in cooling equipment or condensate drains and prevents expensive downtime and high repair costs for analytical equipment.

In the event of alarm, the power for the sample gas pump or a solenoid valve is to be switched off in the gas sample conditioning system.

Corresponding tube connectors can be optionally supplied (see data sheet "Flexible and rigid tube fittings, plugs and connectors with barbed fitting").

The optionally integrated liquid sensor LA3 works according to the principle of electrical conductivity from a conductance value of 50 $\mu\text{S}/\text{cm}$. To prevent electrolytic effects on the sensor surface, the sensor is operated with alternating current.

The liquid sensor is located in the sample gas inlet in such a way that any liquid droplets in the sample gas flow are directly attracted to the sensor surface due to gravity and even the smallest liquid droplets trigger a safe and fast alarm.

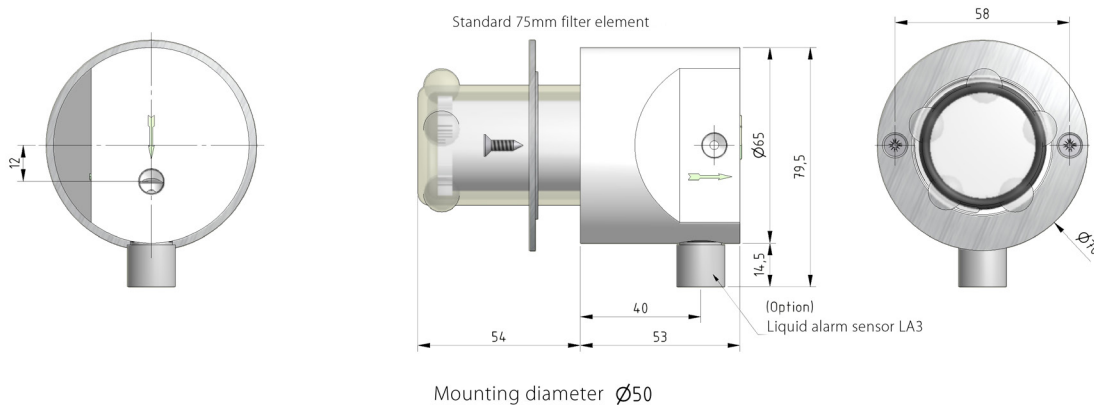

The required electronic controller LA-1 is available in various versions and is described in the separate data sheet "Electronic Controllers Series LA®".

Description

Special features of the M&C front-panel mounting filter FPF+ are the large filter surface, a great variety of different filter element materials and porosities, the integrable liquid alarm sensor LA3, low internal dead volume, simple construction and assembly as well as universal applicability.

The condition of the filter is immediately visible from the outside through the filter glass without opening the filter fitting. No tools are required for changing the filter element, whereby the optimum positioning of the O-ring always ensures a reliable sealing between the filter glass and the filter body.

The gas connections are located at the rear of the filter body. If no liquid sensor is used, the sample gas inlet at the front ring attachment can be rotated in 90° steps so that flexible adaptation to local conditions is possible during installation.

** Appropriate electronic controller see data sheet "Electronic Controllers Series LA®"

FT®, FSS®, FP®, FS®

Universal Filter Series FP®, FT®

Versions FP, FT, FS, FSS

Special Features

- **Universal in use**
- **Modular design**
- **Large variety of materials**
- **Deep-acting filter element**
- **Reliable separation of solids**
- **Wall-mounting bracket**
- **Easy maintenance**

Application

M&C universal filters reliably separate solids, in particular extremely fine particles, occurring in analysis techniques in gas filtration, using very fine, deep-acting filter elements.

Thanks to their universal design, the filters can also be used as separators (without a filter element), liquid filters or, with adsorption cartridges, as adsorption filters.

For ambient or medium temperatures up to 180 °C [356 °F], a stainless steel version FSS or FT-H version can be offered.

Description

The modular design of the filters and the compatibility of the fitting components filter head, filter body and filter element enable optimum adaptation to process conditions.

Elements of different materials and porosities are available and their degree of contamination and condition can be assessed from the outside without having to open the filter housings (not with FSS).

No tools are required for element replacement, and the optimum positioning of the O-ring always ensures a safe sealing between the filter body and the filter head.

The filters are designed in such a way that only liquid-free gas flows through the filter elements when condensation droplets accumulate.

The versions FP-D, FT-D, FS-D and FSS-D can also be connected to a condensate trap or a liquid alarm sensor. Filter inlet and outlet can be rotated 180° on the mounting bracket so that flexible adaptation to local conditions is possible during installation.

FSS-.../H350

Electrically Heated Filter

Type FSS-2K/H350, FSS-3SS/H350 and FSS-FW/H350

with integrated thermostat, max. 350 °C [662 °F]

Special Features

- Electrically heated, max. 350 °C [662 °F]
- Large filter surface
- Consistent connection technique
- No cold bridges
- Integrated thermostat
- Status alarm
- Easy maintenance

Application

The electrically heated M&C filter type FSS/H350 is used for the separation of solid contaminations in analytical technology up to an operating temperature of 350 °C [662 °F]. Filter elements with high filter porosity and great deep-acting effect are used for optimum filtration of ultrafine particles.

The overall concept guarantees reliable operation and easy maintenance. Filter cleaning or filter element replacement can be carried out without using tools, and the heated sample lines do not have to be dismantled for this purpose.

Description

The electrically heated M&C filter FSS/H350 is mounted on a thermally insulated mounting plate. The stainless steel filter body with integrated filter element, optionally ceramic, stainless steel or glass fibre filter wool, is fully enclosed by a metallic heat-conducting jacket. Heating is provided by a high-performance heating element. The control temperature can be set from +50 °C to 350 °C [122 to 662 °F] at the integrated control thermostat with high temperature limiter at 30 °C above the setpoint and low temperature alarm contact at 30 °C below the setpoint.

To avoid cold bridges, the gas-tight welded connection fittings are also heated by means of two-part heat-conducting jaws. The filter has a thermally insulated cover. The electrical terminal box with integrated thermostat and two tube clamps are located outside the cover. These serve to fasten the electrically heated sample lines - see data sheets for electrically heated sample lines type 3/4/5-N/M/H, type 3/4M-S for permanent installation, type 3/4/5-N/M EX and type 3/4/5-5/30/50/80/100/120 (Ex).

Heated Filter Type FSS/H350

Dimensions in mm [Inches]

Technical Data

Part No.	01F3035(a)*	01F3030(a)*	01F3045(a)*
Filter element length 150 mm, material	Ceramic	Stainless steel SS316	Spun glass
Filter porosity	2 µm	3 µm	
Filter surface	140 cm ²		
Operating pressure max.	5 bar g		
Ambient temperature/storage temperature	-20 °C to +60 °C [-4° F to 140 °F]		
Dead volume	130 cm ³		
Gas connections	Swagelok tube connector ø 6 mm, optional ø 1/4"		
Temperature controller	Capillary tube thermostat integrated in electrical junction box, with high temperature limiter and low temperature alarm contact		
Operating temperature	Adjustable from +50 °C to 350 °C [122 °F to 662 °F], factory-set at 250 °C [482 °F]		
Temperature alarm contact	Alarm point at -30 °C below T _{SET} change over contact, voltage-free, contact rating 250 V, 3 A ~0.25 A =		
Power supply	230 V 50 Hz, 800 VA or Part No. with (a)*: 115 V, 60 Hz		
Electrical connections	Terminals 4 mm ² , 2 x cable glands PG13		
Method of mounting	Wall-mounting		
Protection classification/electrical standard	IP 54 EN 60529/EN 61010, EN 60519-1		
Dimensions (W x H x D)	250 x 300 x 300 mm [≈ 9.8" x 11.8" x 11.8"]		
Weight	11 kg [≈ 24.3 lbs]		
Material of sample-contacting parts	Filter chamber: stainless steel 316Ti/sealing: graphite		

* (a) is an addition to the Part No. for 115 V versions.

Differential pressure in mbar with clean filter element

The differential pressure data of filter element FW150 are average values depending on the variable filling density.

FT...H2

Electrically Heated Universal Filter Series FT®

Version FT-...-H2, heated at 180 °C

Special Features

- Electrically heated, max. 180 °C [356 °F]
- Consistent connection technique
- No cold bridges
- Integrated thermostat
- Status alarm
- Easy maintenance

Application

The electrically heated M&C universal filter is used for separating solid contaminations in analytical technology up to max. 180 °C [356 °F] operating temperature.

Filter elements with high filter porosity and great deep-acting effect are used for optimum filtration of ultra-fine particles.

Description

The universal filter made of temperature-resistant PTFE with integrated filter element (porosity: 3 µm or 0.1 µm) is located in a two-part aluminium body.

Heating and temperature control are provided by a heating cartridge and an adjustable thermostat (PT100 resistance thermometer on request) incl. high temperature limiter and low temperature alarm with 30 °C fixed to the temperature setpoint.

The switching element of the thermostat and the electrical connection terminals are arranged in a junction box. The operating temperature of the filter is indicated by a thermometer. For thermal insulation and for reasons of touch protection, the heated filter section is covered with an insulated cover.

In order to prevent cold spots at the connection fittings, these are also heated. Tube clamps on both sides are used to support the sample lines.

Weight	6 kg [≈ 13.2 lbs]		
Method of mounting	Wall-mounting		
Sample connections	G 1/4" i DIN ISO 228/1**		
Material of sample-contacting parts	PTFE, glass, FKM		

* (a) is an addition to the Part No. for 115 V versions.

** The thread lengths of the screw-in threads correspond to the respective applicable standard. The tolerances of the thread standards are matched to metal threads and cannot be applied to plastic threads.

Differential pressure in mbar with clean filter elements

Please note: NI/h and NI/min refer to the German standard DIN 1343 and are based on these standard conditions: 0 °C [32 °F], 1013 mbar.

SP53-PP-2GF and SP52-PP-2GF

Ambient Air Suction Filter Series SP®

Versions SP52-PP-2GF, SP52-PV-2GF, SP52-T-2GF, SP52-A/A-2GF and SP52-SS-20T without splash-proof sleeve

Versions SP53-PP-2GF and SP53-T-2GF with splash-proof sleeve

Special Features

- **Ultra-fine filtration**
- **Large active filter surface**
- **Various materials available**
- **Easy mounting**
- **Straightforward maintenance**

Application

M&C ambient air filters SP52/SP53 are used for filtration of ambient air in gas analyzing systems. The main applications are ambient air measurements and air conditioning systems.

Description

The variable design of the M&C ambient air filters SP52/SP53 allows a perfect adaptation to local conditions. Filter body and filter element are available in various materials and filter porosities.

The open design allows the degree of filter contamination to be viewed at all times and ensures straightforward filter change without having to use tools.

Wall-mounting is carried out by means of 2 screws in the filter flange. The acrylic glass protective sleeve on version SP53 serves as splash water protection.
